

Rollit XL – single- or double-sided

The flexible display system for rolled large-format banners. A width of 240 cm and a height of 225 cm give you a display area that will really make your message stand out and that allows you to build attractive visual solutions. The system offers both single- and double-sided displays using our flexible cassette system. A double-sided Rollit XL is the perfect solution when you want a real eye-catcher. The advantages of the cassette system are that the banner is protected while being transported, and to display it you just roll it out – quick and easy to set up.

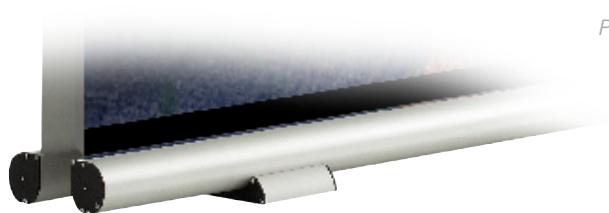

Rollit XL has double telescopic struts that can be varied in height from 95 – 225 cm. Standard widths are 200 and 240 cm. Comes in a protective woven bag.
